Introduction

This website is about the nonprofit organization, Pet Heaven, takes care of the well-being of stray animals (dogs and cats whose original owners no longer wish to retain them) and lets web users request that the abandoned animals be adopted.
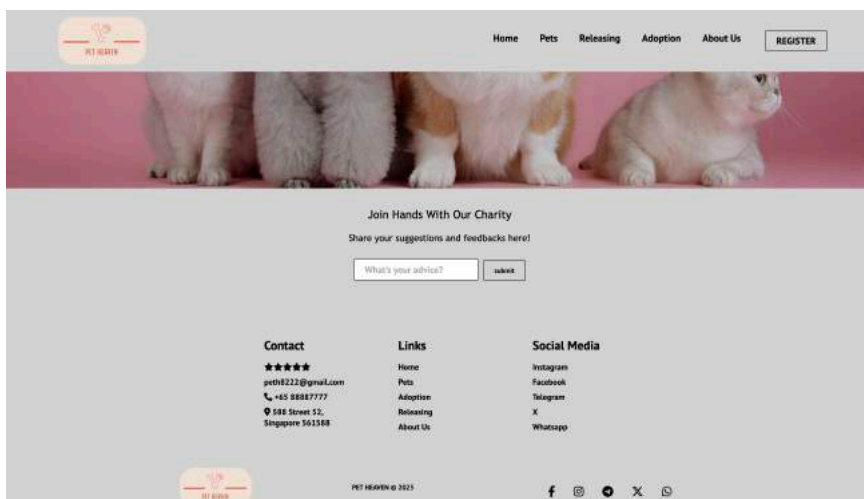

The society's employees will follow up the online request, speak with the requester, and locate a good home for the stray animal.
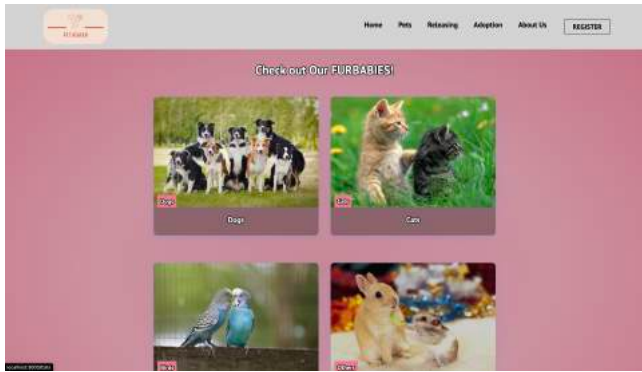

References I used for this website

To be honest, I looked through several websites, such as W3Schools, YouTube, pet adoption websites, and others, for a long time. I reviewed their sample inspections and codes. I also give credit to the several YouTubers whose videos I viewed and used as references. About my website. Following my browsing and referencing, I reviewed the lecturer's advice. I then started by creating the log-in page.

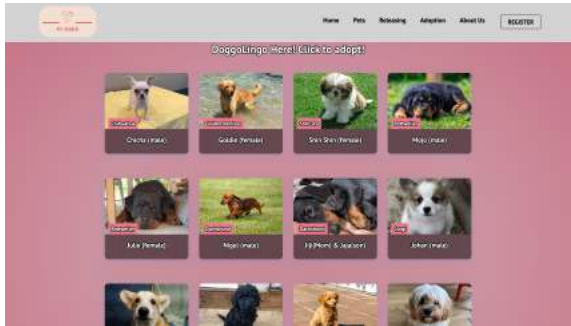

Initially, this is my home that I created using these components: navbar, hero, button, footer. In home page I link up with pet, when you click pet list button the website will take you to pet list, where u can see Pets in navigation bar. And below, it is a footer. We can see the contact and also link up to every section.
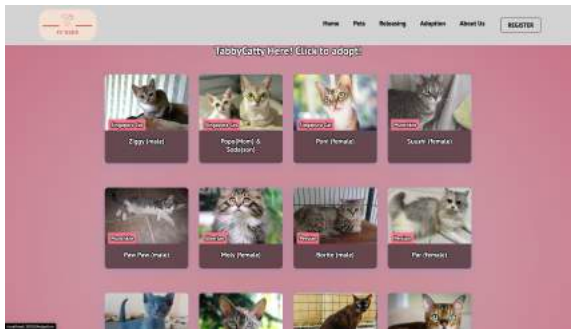

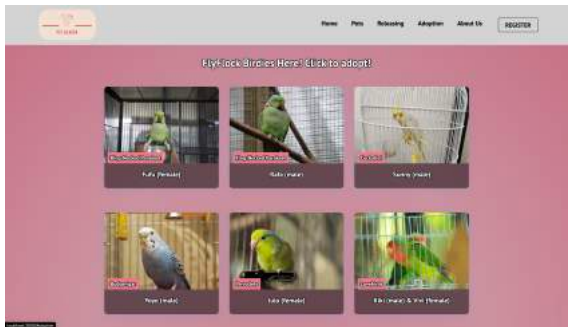

When we check pet list, you can see 4 options to choose: dogs, cats, birds, others. When you click on a certain option, you will be taken to the list of respective option.

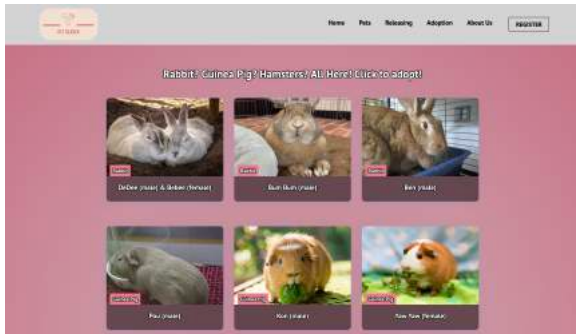

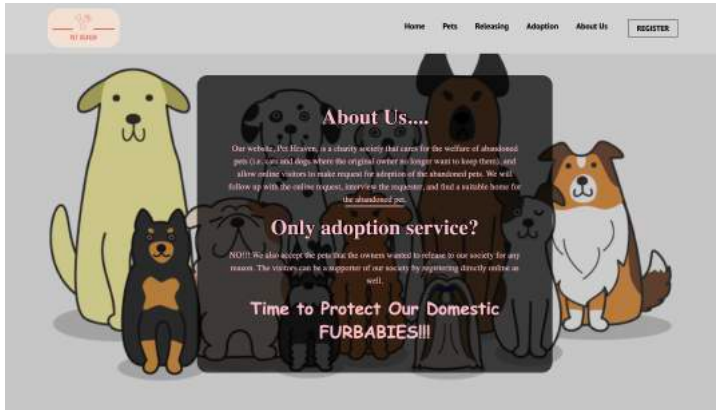

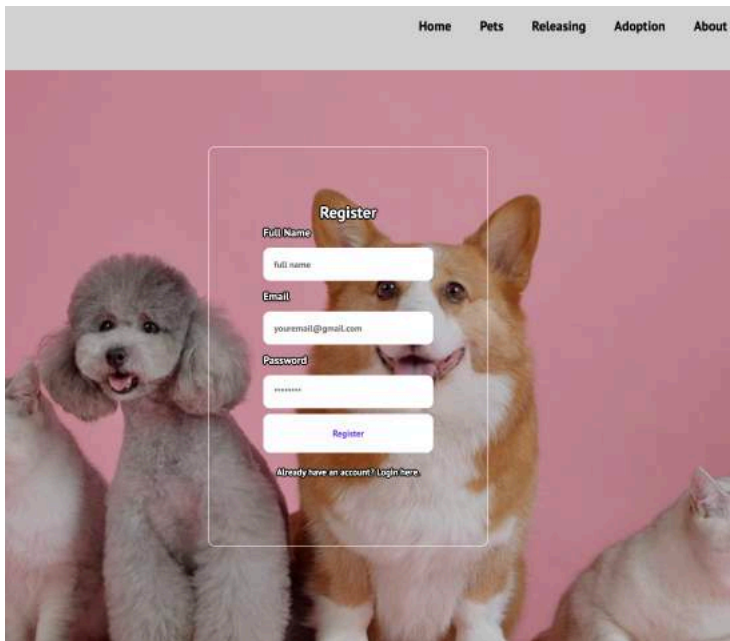

Dog list

Cat list

Bird list

And the other pet list.

Here is the releasing form which people who can't take care of their pets may release by submitting and taking appointment.

Here is the adoption form for those who want to adopt the pets from Pet Heaven.

The about us section which describes about the Pet Heaven's details.

This is registration for membership who wants to help the charity. If you have an account, click log in below the register button. It will let you log in like this:

Conclusion

I mostly design the website using reactjs, html, css, jsx. I made a lot of components and also revealing form data and login/ register data on console. There are also reusable components like button, item, cardItem, etc… I believe there are more features to be added to this website. However, there are some issues in my computer to do some backend features. So, last but not least, I guess this website covers most of the details mentioned in assignment question and also the website visitors will find this website as a convenient and easily usable website. (gmail: peth8222@gmail.com, password: VzcfoBp72U) you can check forms mailed here.
